

# Agent-based modelling

Summer Semester 2024, University of Konstanz

Henri Kauhanen

Welcome to this course on agent-based models (ABMs). Use the top bar to navigate.

This website is “alive” – it will update as the course progresses, with a new lecture added each week.

The exercises are not mandatory, but I **strongly recommend** that you complete them. Doing ABMs requires programming, and the best (perhaps only?) way of learning programming is by actually doing some programming.

If you notice any errors or typos, would you be so kind as to point them out to me either at lectures or via email. Thank you!

– Henri
